Tutankhamun's status as ancient Egypt's most famous pharaoh was cemented when his intact tomb was discovered by archaeologist Howard Carter in November 1922. But how much do you know about the famous 'boy king'?

Tutankhamun was born in c1334 BC, possibly at Amarna, the city of his father, Akhenaten. Tutankhamun's mummy shows that he died when he was approximately 18 years old, but it is not known exactly how he died. Tutankhamun's body suffered damage at various stages – immediately before or immediately after death; during the curiously hasty mummification process; within the tomb (where a chemical reaction caused it to leak in its coffin); and while being extracted from the coffin. Obvious damage to Tutankhamun's chest – a hunting accident, or death on the battlefield. Others have suggested

Cleopatra and the Romans

After a few years, Ptolemy XIII decided that he no longer wanted to rule with his sister, Cleopatra. So, he ordered that she be sent away and not allowed to return. Cleopatra travelled to Syria where she began to raise an army in the hopes of one day returning.

At the same time, Ptolemy XIII had managed to anger a Roman general called Julius Caesar. Caesar travelled from Rome to Egypt and demanded to speak to Cleopatra and her brother. However, Cleopatra knew that she wouldn't be allowed to meet Caesar so it is thought that she wrapped herself in a duvet and had herself sent to him.
